

## Tired of Overpaying for Internet and Slow Speeds?

Hello, I'm Richard and I'm one of your neighbors down the street. I am a university student and have become increasingly aware of the slow internet speeds and expensive pricing charged by service providers in our area.

I have been working to bring cost effective, high speed internet options to our local community. I have secured a bulk contract at very favorable pricing and high speeds (see below), but this requires the buy-in and support of our community.

PLAN	DOWNLOAD, UP TO* (mbps)	UPLOAD, UP TO* (mbps)	ALL-IN PRICE/MONTH (INCL. TAXES AND FEES)	POTENTIAL MONTHLY SAVINGS
Internet 5	5	1	\$25	\$48
Internet 10	10	2	\$30	\$26
Internet 20	20	3	\$40	No similar plan
Internet 40	40	5	\$60	No similar plan

The price per month is all in, inclusive of all taxes and fees. Check your current internet bill, and you'll see what I mean when I say that sneaky fees can balloon up your monthly costs. The amount is prepaid at the beginning of each month and data usage is unlimited.

Setup is easy and will be a one-time charge of \$105-170, depending on whether you have your own router already. You will receive a router, carrier-grade CPE radio, and ethernet cable for the installation.

Here's a sample of how much you'll save if you're using one of the two major ISPs in our region. which charges \$64.95/month for up to 5mbps download and 0.68mbps upload speeds. After tax, that's \$73.39.

	Cumulative Fees Paid (Internet 5 Plan)					
	Month 1	Month 6	Month 12	Month 24	Month 36	Month 48
What you currently pay	\$73.39	\$440.34	\$880.68	\$1761.36	\$2642.04	\$3522.72
New pricing	\$25.00	\$150.00	\$300.00	\$600.00	\$900.00	\$1200.00
<b>Total Savings</b>	<b>\$48.39</b>	<b>\$290.34</b>	<b>\$580.68</b>	<b>\$1161.36</b>	<b>\$1742.04</b>	<b>\$2322.72</b>

\*Max speed (mbps = megabits per second). Speed may vary based on weather, reception, and other factors. I've done some preliminary testing and I've been averaging about 70 mbps download and 40 mbps upload using a client radio. This should be more than enough to compensate for speed reducing factors, even on the Internet 40 plan, but this is no guarantee.

**After just 1 year, you would have saved \$581 and after 4 years, you would save a total of \$2323!**

I'll be actively developing this network over the summer and ideally throughout the foreseeable future. However, if there's not enough interest, I may have to cancel this entire project. I feel that if I'm going to do something I'd like to do a good job, and without sufficient interest, it's hard to do this without spending a lot of my own money.
